

CANOPUS

Canopus Vintage 16 & 42 Strand Snares

Using 16 strands gives less overall sound of the snare wires themselves - giving the actual shell sound more presence. When the sound characteristics of the shell are more defined, the overall drum sound feels “thicker” and more full. For those drummers who use calf or imitation calf drum heads on concert drums, or for those who may feel that the sound of straight concert snare wires is too dry, we highly recommend the **Canopus VSW16** to give a moderately dry sound.

- * 0.5mm thick Brass End Plate
- * Vintage Wire 16 Strand
- * Dry (DR) Only

These new **Canopus WSW42** strand snare wires give a unique rich and full sound, and provide great impact. Having 42 strands may initially give an impression of being “too much”, but the VSW-42 wires feature ultra thin end plates - allowing players to enjoy maximum tone and response at all volume levels, whilst also providing great sensitivity and control over the sound. Players can enjoy a comfortably muted, tight sound and very quick response.

- * 0.5mm thick Brass End Plate
- * Vintage Wire 42 Strand
- * Dry (DR) Only
